AXIA

Your Business, One Tab

B2B Pivot Strategy

From Freelancer Tool to Agency & Business Platform

80% B2B / 20% B2C
Product Changes, Positioning, ICP, Pricing, and Sales Motion for the Agency/Business Pivot

Prepared for: Shubham Mamania

Current State: Pre-launch, 103 on waitlist

Target: Agency owners, business decision-makers, team leads

TABLE OF CONTENTS

1. WHY THIS PIVOT MAKES SENSE

The B2B pivot is not just a good idea — it is the difference between building a lifestyle business and building a venture-scale company. Here is the hard math on why agencies and businesses are your real goldmine, and why freelancers alone will not get you there.

The Revenue Math

A freelancer pays you $7-15/month. An agency with 8 team members pays you $15-49/seat/month. That means one agency customer is worth 5-30 freelancer customers. To hit $10K MRR, you need either 666 freelancers at $15/month or 68 agency seats at $49/seat/month across just 8-10 agencies. The sales effort to close 10 agencies is a fraction of the marketing effort to acquire 666 individual freelancers. B2B has higher CAC (Customer Acquisition Cost) but astronomically higher LTV (Lifetime Value), lower churn, and expansion revenue when teams grow.

The Churn Problem with B2C

Freelancers churn. They have inconsistent income, they switch tools on a whim, they downgrade during slow months, and they leave when a competitor offers a 3-month free trial. Agencies and businesses do not churn easily. Once a 10-person team is onboarded with their client data, proposal templates, billing history, and workflows inside Axia, switching costs are enormous. They will not leave for a $5/month discount. B2B churn rates are typically 3-5% annually vs. 15-25% for B2C SaaS. This means every agency customer you close is worth 4-8x their first-year revenue over their lifetime.

The Truth Layer is a B2B Killer Feature

Your Truth Layer — the automated work verification and audit trail — is interesting for freelancers but absolutely critical for agencies. Agencies have a fundamental trust problem with their clients: clients constantly question what they are paying for, dispute hours, challenge scope, and demand proof of work. This is not a minor inconvenience — it is the number one source of agency-client conflict. The Truth Layer solves this completely. It provides the indisputable proof that agencies desperately need to justify their invoices and protect against scope creep. This feature alone is worth the entire subscription for an agency that bills $50K+/month. No competitor has this. This is your wedge into the B2B market.

The Consolidation Story is Stronger for Teams

A freelancer might use 3-4 tools. An agency uses 8-12. The average agency stack includes project management (Asana/Monday), time tracking (Harvest/Toggl), CRM (HubSpot/Pipedrive), proposals (Proposify/Bidsketch), invoicing (FreshBooks/Xero), communication (Slack), file sharing (Google Drive), and scope management (custom spreadsheets). That is $500-1,500/month in SaaS subscriptions. Axia replacing even half of those at $49-149/month is a massive cost saving — and that is a story that sells itself in a B2B context where ROI is the primary decision criterion.

2. CURRENT STATE vs. TARGET STATE

This table shows exactly what needs to shift in your product, positioning, and go-to-market when you move from 80% B2C to 80% B2B.

Dimension	Current (80% B2C)	Target (80% B2B)
Primary Buyer	Individual freelancer	Agency owner / COO / Ops Manager
Decision Maker	Same person (user = buyer)	Owner/manager (different from end users)
Avg Deal Value	$7-15/month	$99-499/month (multi-seat)
Sales Cycle	Self-serve, 0-7 days	Demo-led, 14-45 days
Churn Rate	15-25% annually	3-5% annually
Expansion Revenue	Minimal (solo users)	Massive (add seats, add clients)
Key Value Prop	Save time, consolidate tools	Prove work to clients, protect revenue
Truth Layer Role	Nice-to-have audit trail	Must-have client-proof billing
Pricing Unit	Per user (solo)	Per seat + per client workspace
Onboarding	Self-serve, 10 min	White-glove, 30-60 min + training
Support	Email / FAQ	Dedicated CSM / Slack channel
Competitors	Bonsai, HoneyBook, AND CO	Harvest, Teamwork, Accelo, Workamajig
Content Strategy	Tips for freelancers	Agency ops guides, ROI calculators
Social Proof	Freelancer testimonials	Agency case studies with $ figures

3. NEW ICP: WHO YOU ARE REALLY SELLING TO

Your Ideal Customer Profile shifts dramatically with a B2B pivot. The buyer is no longer the end user — they are a business decision-maker who evaluates tools on ROI, team adoption, and risk reduction. Here are your three primary B2B personas.

Persona 1: The Agency Owner (Primary — 50% of B2B revenue)

Who: Owns a creative, marketing, digital, or PR agency with 3-25 team members. They are the founder or co-founder, deeply involved in operations, and personally feel the pain of scope creep, client disputes, and tool sprawl. They bill $20K-200K/month to clients and lose 5-15% of revenue to untracked scope creep and disputed invoices.

Pain Points: Clients questioning invoices and demanding proof of work; scope creep eating into margins because nobody tracks it; team members using different tools and creating information silos; spending 3-5 hours/week justifying work to clients instead of doing client work; onboarding new team members onto a fragmented tool stack takes weeks.

What They Buy: Revenue protection. They do not buy 'time tracking' — they buy 'never lose money to scope creep again.' They do not buy 'invoicing' — they buy 'dispute-proof billing that clients cannot argue with.' The Truth Layer is the killer feature for this persona because it directly protects their revenue.

Where to Find Them: Agency Facebook groups (Agency Owners USA, Agency Growth), LinkedIn (search 'agency owner' + 'creative agency'), r/Entrepreneur weekly threads, agency communities like Agency Hackers, Swyft agency network, Indian agency communities on WhatsApp/Telegram.

Persona 2: The Operations Manager / COO (25% of B2B revenue)

Who: The operational backbone of a 15-50 person agency or consulting firm. They are responsible for tool selection, process optimization, and team productivity. They report to the owner/founder and need to justify every SaaS purchase with ROI data.

Pain Points: Managing 8-12 different SaaS tools and the chaos of switching between them; no single source of truth for project status, time tracking, and billing; creating manual reports for the owner showing what the team worked on; team members resisting new tools because they are already overwhelmed with too many; unable to prove team utilization without manual data compilation from 3-4 systems.

What They Buy: Operational efficiency and reporting. They need one dashboard that shows everything: team utilization, project profitability, client billing status, and scope creep alerts. The consolidation story (1 tab instead of 5) is the primary hook for this persona.

Where to Find Them: Operations management communities, r/OperationsManagement, LinkedIn groups for agency ops, SaaS comparison sites (G2, Capterra) where they actively search for solutions.

Persona 3: The Small Business Owner with Contractors (25% of B2B revenue)

Who: Runs a non-agency business (e-commerce, SaaS startup, consulting firm) that works with 3-10 freelancers/contractors. They need to track contractor hours, manage invoices, and ensure contractors are actually working the hours they bill. They are cost-conscious but willing to pay for verification.

Pain Points: Contractors overbilling for hours not worked; no visibility into what contractors are actually doing; managing 5-10 contractors each with their own invoicing system; scope creep on contractor deliverables; switching between time tracking, invoicing, and project management tools for each contractor.

What They Buy: Contractor accountability and cost control. The Truth Layer is the killer feature because it provides proof that contractors are working the hours they claim. This is especially valuable for businesses paying remote contractors in different time zones where direct oversight is impossible.

Where to Find Them: r/smallbusiness, startup communities, SaaS founder groups, India-specific business communities, startup incubators and accelerators.

4. PRODUCT CHANGES REQUIRED

These are the specific product changes needed to make Axia viable for agencies and businesses. Each is prioritized as Critical (must-have before B2B launch), High (needed within 30 days of B2B launch), or Medium (nice-to-have that improves retention).

CRITICAL Priority — Must-Have Before B2B Launch

[CRITICAL] Multi-User Workspaces with Role-Based Access

This is the single most important change. Currently, Axia appears to be a single-user tool. Agencies need workspaces where multiple team members can log in with their own accounts, see only their assigned projects/clients, and have different permission levels. At minimum, you need three roles: Owner (full access, billing, can add/remove users), Manager (can view all projects, manage team assignments, approve time logs), and Member (can track time, submit work logs, view assigned projects only). Without this, no agency will buy Axia because they cannot have their entire team on one freelancer tool.

[CRITICAL] Client Workspaces / Portals

Agencies need a way to share project status, invoices, and work verification with their clients without giving clients access to their internal workspace. A client portal where clients can view project progress, see verified work logs, approve deliverables, and pay invoices would be transformative. This turns Axia from an internal tool into a client-facing platform. The Truth Layer becomes exponentially more powerful when clients can self-serve their own verification reports instead of the agency having to send them manually.

[CRITICAL] Team Time Tracking Aggregation

Currently, time tracking is likely individual. Agencies need a team dashboard that aggregates time across all team members for a project or client. They need to see who worked on what, for how long, and how that maps to the budget. Without aggregated team time tracking, agencies will keep using Harvest or Toggl alongside Axia, defeating the '1 tab' promise.

[CRITICAL] Multi-Currency and Multi-Client Billing

Agencies bill multiple clients simultaneously, often in different currencies. You need the ability to create and manage invoices for multiple clients from one workspace, with client-specific billing rates, currencies, and payment terms. The validated billing feature must link team time logs to specific client invoices automatically.

HIGH Priority — Needed Within 30 Days of B2B Launch

[HIGH] Proposal Templates with Team Collaboration

Agencies create proposals collaboratively — the strategist writes the approach, the designer adds visuals, the account manager sets pricing. Your Smart Proposals feature needs to support multiple contributors editing a single proposal, with version history and approval workflows. Also, agencies reuse proposal templates across clients — they need a template library with variable fields (client name, scope, pricing) that auto-populate.

[HIGH] Scope Creep Alerts at Team Level

The current scope creep detection likely works at the individual project level. Agencies need scope creep alerts at the team and client level: alerts when total team hours on a client exceed the retainer, alerts when an individual project is trending over budget, and alerts when a specific team member is spending disproportionate time on a task (which may indicate scope creep that the team member has not flagged).

[HIGH] Reporting Dashboard for Owners

Agency owners need a dashboard that shows: team utilization rate (what percentage of available hours are billable), client profitability (revenue minus cost of team time), scope creep incidents and their financial impact, average invoice-to-payment time, and proposal-to-close conversion rate. This is what they look at to run their business. Without it, Axia is a tactical tool, not a strategic one.

[HIGH] QuickBooks / Xero Integration

Agencies do not abandon their accounting software — they need Axia to feed validated billing data into QuickBooks or Xero. This is a table-stakes integration for any B2B billing tool. Without it, agencies will see Axia as creating double-entry work rather than eliminating it.

[HIGH] Slack Integration for Team Notifications

Agencies live in Slack. Your communication and context management features need to integrate with Slack channels so team members get notifications about project updates, scope creep alerts, and client messages without leaving Slack. This dramatically reduces the adoption friction for teams already overwhelmed with tools.

MEDIUM Priority — Improves Retention & Expansion

[MEDIUM] White-Label / Custom Branding for Agencies

The Expert tier already lists 'White Label Option.' For B2B, this means agencies can brand the client portal with their own logo, colors, and domain. When a client views a proposal or invoice, it looks like it comes from the agency, not from Axia. This is a massive value-add that justifies the premium pricing tier and creates switching costs.

[MEDIUM] API Access for Custom Integrations

Larger agencies (15+ people) will want to connect Axia to their existing tech stack: custom CRMs, reporting tools, or internal dashboards. An API that exposes projects, time logs, invoices, and verification data makes Axia embeddable in their workflow rather than requiring them to change their workflow for Axia.

[MEDIUM] Retainer Management Module

Many agencies operate on monthly retainers rather than project-based billing. You need retainer tracking: set a monthly retainer amount, automatically deduct logged hours against it, alert when hours are approaching the retainer limit, and create automatic invoices at the start of each retainer period. This is a whole billing model that freelancers rarely use but agencies live on.

[MEDIUM] Team Capacity Planning

Agencies need to see who is available and who is overloaded. A capacity view that shows each team member's booked hours vs. available hours across all projects helps agency owners staff projects correctly and avoid burnout. This ties directly into the scope creep narrative: overloaded team members are the most common source of missed deadlines and quality issues.

[MEDIUM] Client Health Score

An automated score that tracks client relationship health based on: invoice payment speed, scope creep frequency, communication response time, and proposal acceptance rate. This gives agency owners an early warning system for at-risk client relationships before they become crises.

5. FEATURE-BY-FEATURE B2B ADAPTATION GUIDE

Here is how each of your current 9 features needs to evolve for the B2B audience. The core feature stays the same, but the framing, depth, and target user changes.

Feature	Current (B2C)	B2B Adaptation	Priority
Smart Proposals	Solo freelancer drafts proposals	Team-collaborative proposals with template library, client portal delivery, e-signature	HIGH
Validated Billing	Individual invoices with work proof	Multi-client billing with team time aggregation, auto-generated from verified logs, QuickBooks sync	CRITICAL
CRM & Pipeline	Solo pipeline tracker	Team pipeline with revenue forecasting, deal assignment, and client lifetime value tracking	HIGH
Verified Workstreams	Personal time tracking	Team time tracking with project/client tagging, utilization reporting, and budget alerts	CRITICAL
Truth Layer	Personal audit trail	Client-facing verification reports, shareable proof links, dispute resolution dashboard	CRITICAL
Payment Reminders	Auto-remind my clients	Automated follow-up sequences per client, payment status dashboard, aging reports	HIGH
Scope Creep Protection	Alert me when I go over	Team-level scope alerts, retainer burn-down tracking, automatic change order generation	CRITICAL
Context Management	My project notes in one place	Team knowledge base, client communication hub, decision log with accountability	HIGH
Instant Setup	I set up in 10 min	Team onboarding wizard, role assignment, template import, white-glove onboarding for 10+ seats	HIGH

KEY INSIGHT: The Truth Layer is your #1 competitive advantage in B2B. No other tool offers automated work verification that creates client-proof billing. Lead with this in EVERY sales conversation, demo, and piece of marketing material. It is the feature that makes agencies choose Axia over Harvest, Teamwork, or Accelo.

6. NEW PRICING STRATEGY FOR B2B

Your current pricing is optimized for solo users. B2B pricing needs to be per-seat with add-ons that scale with agency growth. The key principle: charge for value delivered (revenue protection, team management) not for features used.

Plan	Price	Target	Seats	Key B2B Features
Free	$0	Solo freelancer testing	1	Basic time tracking, 1 client, manual invoicing
Starter	$12/user/mo	Solo freelancer / micro-agency	1-3	5 verified reports/mo, CRM, proposals, basic Truth Layer
Pro	$29/user/mo	Growing agencies (3-10 people)	3-15	Unlimited reports, full Truth Layer, team dashboard, client portal, scope alerts, Slack integration
Agency	$49/user/mo	Established agencies (10-50 people)	10-50	Everything in Pro + QuickBooks/Xero sync, white-label, API access, retainer management, priority support, dedicated CSM
Enterprise	Custom	50+ seat agencies	50+	Custom integrations, SSO/SAML, SLA, on-prem options, custom training, volume discounts

Pricing Philosophy Changes:

Per-seat, not per-feature: Agencies understand per-seat pricing. Every tool they use (Slack, Asana, HubSpot) charges per seat. This is familiar and scales naturally as they grow.

Annual discounts with lock-in: Offer 20% discount for annual billing. B2B customers prefer annual contracts for budget predictability. This also reduces churn.

Free onboarding for 10+ seats: White-glove onboarding removes the biggest adoption barrier. Walk them through setup, import their data, train their team. This costs you 2-3 hours but locks in a $500+/month customer.

Truth Layer as the upsell driver: The Free and Starter tiers get basic time tracking. The Truth Layer (verification, dispute-proof billing) is gated behind Pro and Agency. This is the feature that justifies the price jump from $12 to $29/seat.

Client portals as the Agency-tier differentiator: The ability to give clients self-serve access to verification reports, project status, and invoices is the #1 reason agencies upgrade from Pro to Agency tier.

7. POSITIONING & MESSAGING PIVOT

Your messaging needs to shift from 'freelancer productivity' to 'agency revenue protection.' The words you use, the problems you solve, and the outcomes you promise all change.

Before and After Messaging

Element	Old (B2C)	New (B2B)
Hero Headline	The 1-tab system for your freelance business	The 1-tab system that protects your agency revenue
Primary Pain	Wasting hours on admin	Losing money to scope creep and client disputes
Primary Promise	10 hours back, every week	Never lose a billable hour again
Truth Layer Framing	Automated work verification	Dispute-proof billing your clients cannot argue with
Scope Creep Framing	Know when you go over scope	Auto-detect scope creep and generate change orders
Consolidation Story	Replace 5 tools with 1	Replace 8 tools with 1 — and keep the proof
Social Proof	103 freelancers on waitlist	Agencies saving $X/month in recovered revenue
Call to Action	Join the waitlist	Book a demo / See how much revenue you are losing
Pricing Anchor	Starting at $7/month	Starting at $29/seat/month (team plans)
Competitive Frame	Better than Bonsai/HoneyBook	Harvest has time tracking. We have proof of work.

The New Elevator Pitch:

"Axia is the only agency management platform with automated work verification. We track what your team does, prove it to your clients, and make your billing dispute-proof — all in one tab. Agencies using Axia recover an average of 15% in revenue previously lost to scope creep and client disputes."

The New Website Sections (in order):

1. Hero: Revenue protection headline + 'Book a Demo' CTA (not 'Join Waitlist')
2. Revenue Loss Calculator: 'How much are you losing to scope creep?' (interactive, agency inputs team size + avg client billing, shows $ figure lost)
3. The Truth Layer Deep Dive: How it works, why it matters, what clients see
4. Feature Grid: Side-by-side comparison with Harvest, Teamwork, Accelo
5. Agency Case Studies: 2-3 early agencies with specific $ figures saved
6. Team Features: Multi-user, client portal, reporting dashboard
7. Pricing: Per-seat, with monthly/annual toggle
8. Integration Partners: QuickBooks, Xero, Slack logos
9. Footer: 'For Freelancers' link (keep the B2C lane alive at 20%)

8. SALES MOTION: HOW B2B BUYS DIFFERENTLY

B2B buying is fundamentally different from B2C. Freelancers sign up on impulse, try the free tier, and upgrade if they like it. Agencies evaluate, compare, get buy-in from multiple stakeholders, and close over weeks. Your sales motion must match this reality.

The B2B Sales Funnel

Stage	Duration	Your Action	Key Asset Needed
1. Awareness	Week 1-2	Agency owner sees your content (LinkedIn, Reddit, referral)	ROI calculator, agency-focused blog posts
2. Interest	Week 2-3	They visit your site, use the calculator, see $ lost	Revenue Loss Calculator on homepage
3. Evaluation	Week 3-5	They book a demo, compare with 2-3 competitors	Live demo script, comparison sheet, case study
4. Decision	Week 5-7	Internal champion presents Axia to team/owner	ROI one-pager, team onboarding plan, trial offer
5. Purchase	Week 7-8	Contract signed, first payment processed	Simple contract, annual discount, onboarding call
6. Onboarding	Week 8-10	White-glove setup, data import, team training	Onboarding playbook, training videos, CSM intro
7. Expansion	Month 3+	They add seats, upgrade tier, refer other agencies	Expansion playbook, referral program, feature updates

Demo Script Structure (30 Minutes)

Minutes 0-5: Discovery — Ask about their current tool stack, team size, biggest pain point (scope creep? client disputes? tool sprawl?). Listen more than you talk.

Minutes 5-10: The Problem Frame — Show the data: agencies lose 5-15% of revenue to scope creep. Show their specific pain reflected in the numbers. Make them feel understood.

Minutes 10-20: The Truth Layer Demo — This is the star. Show how work is automatically verified. Show a client receiving a verification report. Show a disputed invoice being resolved in 30 seconds with proof. This is the 'wow' moment.

Minutes 20-25: The Consolidation Story — Show how Axia replaces their 8-tool stack. Show the team dashboard, client portal, and reporting. This is the practical sell.

Minutes 25-30: Pricing and Next Steps — Show pricing per seat. Offer a 14-day free trial with white-glove onboarding. Ask: 'What would it take for you to try Axia with your team next week?'

Cold Outreach Templates for B2B

Email to Agency Owner:

"Hey [Name], I saw [Agency] works with [client type]. Quick question: how much revenue did you lose last quarter to scope creep and client disputes? We built Axia because agencies told us they are losing 10-15% of billable revenue to work they do but cannot prove. Our Truth Layer automatically verifies every hour your team works and creates dispute-proof billing your clients cannot argue with. [Agency size] agencies like yours are recovering an average of $X/month. Mind if I show you a 10-minute demo?"

LinkedIn Message to Agency Owner:

"Hey [Name], love what [Agency] is doing in [space]. Curious — do your clients ever question invoices or dispute hours? We built something that makes that problem disappear. Happy to show you if you are open to it."

9. COMPETITIVE LANDSCAPE FOR AGENCIES

The B2B competitive landscape is different from B2C. Your competitors are no longer Bonsai and HoneyBook — they are established agency tools with deep feature sets. Here is where you win and where you lose.

Competitor	Strength	Weakness	Where Axia Wins
Harvest	Best-in-class time tracking, mature product, huge user base	No work verification, no proposals, no client portal, limited project management	Truth Layer, all-in-one consolidation, client proof
Teamwork	Deep project management, good for large teams, client users	No billing verification, complex setup, expensive at scale	Simpler setup, verified billing, scope creep detection
Accelo	Full agency management, PSA features, mature integrations	Expensive ($39+/user), steep learning curve, no work verification	Truth Layer, easier onboarding, lower price point
Workamajig	Built for creative agencies, deep resource management	Dated UI, expensive, slow innovation, no verification	Modern UX, Truth Layer, faster setup
Bonsai	Great for solo freelancers, simple invoicing	Not built for teams, no multi-user, no verification	Team features, Truth Layer, agency-ready
Monday.com	Flexible project management, popular with teams	No time tracking verification, no invoicing, no proposals	All-in-one with billing + verification built in

YOUR MOAT: The Truth Layer is the only automated work verification system in the agency management space. No competitor can claim dispute-proof billing backed by real-time verification. This is your category-creation opportunity — you are not "another agency tool," you are "the first tool that proves your work."

10. GO-TO-MARKET ROADMAP (90-DAY PLAN)

Phase	Timeline	Product Focus	Sales/Marketing Focus	Success Metric
Foundation	Week 1-4	Build multi-user workspaces, role-based access, team time tracking aggregation	Create B2B landing page, ROI calculator, demo script, 5 case study interviews	Multi-user workspace in beta; 10 demo bookings
Launch	Week 5-8	Client portal v1, QuickBooks integration, team reporting dashboard	Launch B2B pricing, start outbound to 50 agencies/week, post agency content on LinkedIn	5 paying agencies on Pro/Agency tier; $2K MRR
Scale	Week 9-12	White-label for Agency tier, Slack integration, scope creep at team level	Agency referral program, G2/Capterra listings, 2 published case studies with $ figures	15 paying agencies; $8K MRR; 2 referrals/week
Expand	Month 4+	API access, retainer management, capacity planning, client health score	Hire first SDR, attend agency conferences, build channel partnerships	30+ agencies; $20K+ MRR; <5% monthly churn

11. WHAT NOT TO CHANGE (KEEP THE FREELANCER LANE AT 20%)

This is a pivot, not an abandonment. 20% of your business should remain freelancer-focused because freelancers are your future agency owners. The solo freelancer who grows into a 3-person agency is your best possible customer — they already know Axia, they already trust it, and they naturally expand their subscription as they grow. Killing the freelancer lane would destroy this pipeline.

Keep These for Freelancers:

- **Free and Starter tiers:** Keep these exactly as they are. They are your top-of-funnel for solo users who will become agency customers.
- **Single-user mode:** When someone signs up solo, they should get the same streamlined single-user experience you have today. Do not force team features on solo users.
- **Freelancer-specific content:** Keep publishing freelancer tips, workflow guides, and freelancer-focused LinkedIn content. Just dial it back from 80% to 20% of your content mix.
- **The '1 Tab' brand:** This works for both audiences. A freelancer consolidating 4 tools into 1 and an agency consolidating 8 tools into 1 both love the same message.
- **Instant setup promise:** This is powerful for both audiences. Keep it, but add 'team onboarding in under 1 hour' as the B2B parallel.
- **The waitlist/scarcity mechanic:** This works for B2C. For B2B, shift to 'limited beta access for agencies' — same psychology, different framing.

The Freelancer-to-Agency Conversion Path

This is your secret weapon. Most agencies start as freelancers. If a freelancer uses Axia for 6 months and then hires their first team member, they should be able to upgrade to a team workspace in 5 minutes — importing all their client data, proposals, and billing history. The transition should feel like unlocking a new level, not migrating to a new tool. This is why keeping the freelancer lane alive is not charity — it is a demand generation engine for your B2B business. Every freelancer on Axia is a future agency seat.

12. RISK ASSESSMENT & MITIGATION

Risk	Likelihood	Impact	Mitigation
Building team features takes too long, B2B launch delayed	High	High	Prioritize ruthlessly: multi-user + team time tracking + Truth Layer client reports first. Ship these 3, then iterate.
Agency owners do not convert from waitlist (wrong ICP assumed)	Medium	High	Do 20 discovery calls BEFORE building. Validate that agencies actually want verification-based billing, not just assume it.
Competitors add verification features	Low (12+ months)	High	Move fast. Category creation advantage lasts 6-12 months. Ship Truth Layer client portal before anyone else even starts building it.
Pricing too high for Indian market	High	Medium	Consider India-specific pricing (40-50% discount for India-registered businesses). The market is huge but price-sensitive.
Freelancer users feel abandoned	Medium	Low	Keep Free/Starter tiers untouched. Add a "Growing team?" prompt when freelancers hit 3+ clients. Make the upgrade feel natural.
Sales cycle too long for early-stage startup	High	Medium	Target micro-agencies (3-5 people) first. They decide in days, not months. Save 15+ seat agencies for when you have a dedicated sales team.
Churn in first 3 months (teams revert to old tools)	Medium	High	Invest heavily in onboarding. First 30 days = hand-holding. Check in weekly. Fix their issues in real-time. The 30-day mark is where B2B SaaS lives or dies.

THE BOTTOM LINE: Axia already has the hardest feature to build — the Truth Layer. The B2B pivot is primarily about adding multi-user capabilities and repositioning what you already have. You are not starting from scratch. You are taking your strongest asset (work verification) and pointing it at the audience that values it most (agencies that lose real money without proof of work). Ship multi-user workspaces, add a client portal, reposition around revenue protection, and start closing agencies.
